Target User

This section describes the target user group, their context and constraints, and explains how user involvement is integrated across the different phases of the project.

Users

Defines the main user groups involved in or affected by the project, helping clarify whose needs and perspectives should guide decisions.

Primary

University students involved in research-oriented or project-based courses

+ Add new primary users

Secondary

Academic supervisors

+ Add new secondary users

Stakeholders

+ Add stakeholders

Context & Environment

Describes the conditions in which the product will be used, including environmental, technical, and situational constraints.

Typical usage context

On-campus

Commuting

At home

+ Add new usage context

Device constraints

Mobile-first

Limited attention

Offline

+ Add new device constraints

Situational constraints

+ Add new situational constraints

Assumptions & Open questions

Assumptions

These are things the team believes to be true before conducting user research. They justify why research is needed.

- Students manage multiple academic tools and platforms (LMS, email, portals, apps), which leads to fragmentation and overload.
- Students often miss important information (deadlines, announcements, room changes) due to inconsistent communication channels.
- Students rely heavily on mobile devices to manage their academic life, especially outside class hours.

+ Add new assumptions

Open questions

Identifies key uncertainties that require user research to be answered and guide the exploratory phase.

- How do students currently keep track of academic tasks, deadlines, and updates?
- What types of information do students most frequently miss or misunderstand?
- How often do students actively check academic platforms versus relying on notifications?

+ Add new open questions

Sample size & Criteria

+ Add sample size

User inclusion & roles

This section shows how users are involved across the project phases when following the platform's recommended process.

Phase	User inclusion	User role
✓ Problem Definition & Context	Included	Framing needs and context
User Research	Will be included	Interviews and exploratory insights
Ideation & Conceptualization	Will be included	Personas and scenarios
Solution Design & Specification	Will be included	Validation of flows and content
Testing & Transfer	Will be included	Usability and feedback
