

Next phases

This section outlines the upcoming phases of the project and the main activities planned for each stage.

- Phase 3
- Phase 4
- Phase 5

Phase 3: Ideation & Conceptualization

The checklist below outlines the recommended steps for this phase. Actions will be enabled when the phase becomes active.

Checklist

Synthesize research insights into key themes

Cluster findings from user research to identify patterns, needs, and opportunity areas.

Define problem statements or design challenges

Reframe insights into clear, user-centered problem statements to guide ideation.

Develop preliminary user personas

Create representative profiles based on research to keep user needs visible during ideation.

Map high-level user journeys or scenarios

Describe how users currently experience the problem and how future solutions could support them.

Explore solution ideas and concepts

Generate multiple concepts through sketches, notes, or simple diagrams without focusing on feasibility yet.

Prioritize concepts based on relevance and constraints

Select concepts to carry forward based on user value, project goals, and technical or academic constraints.
