

# Tools Database

A supportive reference that helps research teams identify tools that can support UX/UI activities at different project stages. Tools are presented as contextual examples rather than prescriptive recommendations.

- Problem Definition & Context
- User Research
- Ideation & Conceptualization
- Solution Design & Specification
- Testing & Transfer

## Testing & Transfer

Evaluating solutions and documenting outcomes.

|                                                                                     |                                   |                                                                                           |                          |
